PROFILE

B.E. Computer Engineering, 2024. Frontend engineer with 2+ years professional experience in JavaScript & React.js, writing clean, reusable, and maintainable code. Hands-on backend experience from side projects in Express and Nest: CRUD, auth (RBAC, OAuth), transactional workflows, architectural patterns (MVC), middleware, CI/CD.

EXPERIENCE

Mosaic Apps | Frontend Web Developer (React.JS, Next.JS, Redux) (Remote)

June 2024 – Present.

Mosaic Apps provides event and community management solutions, streamlining everything from check-ins to engagement with powerful tools for tracking, communication, and connection.

- Develop payment flow for purchasing expo booths, supporting multiple gateways (Stripe, PayPal) with a wizard-style form, leveraging Context API for type-safe state management; integrated item-locking APIs and dynamically loaded SDKs based on admin portal-configured keys.
- Develop UI configuration system from admin panel to manage user portal — enabled dynamic data per section, reordering of sections, and on-demand loading in the user portal.
- Create many type-safe React component abstractions and custom hooks to boost team productivity.
- Develop custom GeoJSON-to-PDF export tool for expo floor maps, with features like layer toggling, color customization, and font scaling.
- Design a plug-and-play, feature-rich table using modular hooks for sorting, editing, dragging, and pagination, enabling outer control and avoiding redundant internal states.

Cloud Native Compliance Maven | Frontend Web Developer (React.JS) (Remote)

June 2023 – July 2025.

US-based startup focused on providing services to automate Governance, Risk, and Compliance (GRC) processes, with modules for complete organizational management.

- Designed (Figma) and implemented modules like Access Management, Risk Management, POAM, and RBAC, with notable functionalities like excel imports, complex table functionalities, Jira integrations, etc
- Conducted interviews, trained new interns on the codebase and product use cases to speed up onboarding.
- Actively contributed to system-level module design, aligning and implementing UI based on architectural decisions and functional flow.

PROJECTS

Society Management Portal ([Demo](#)) – React.JS, Typescript, MUI, Nest.JS, PostgreSQL

- User Module: Onboarding through invite-only, controlled by society office bearers & super admin, along with force reset-password, forgot password, user inactivation, RBAC for controlled access, JWTs.
- **Secure document storage with cloud sync:** Documents CRUD, with write operations authorized through RBAC, and every action synced with a 3rd party cloud storage provider, integrated into the module service via the adapter pattern. Folders have self-referencing rows to enable a file system and use recursive functions to build paths on frontend for file/folder searching, and breadcrumbs.

E-commerce Platform ([Demo](#)) – MERN Stack, TailwindCSS, JWT, OTP Verifications

- Multi-vendor system, with admin verifications for controlled product & seller visibility and purchases.
- Implemented an order & delivery system with status updates by sellers, and delivery confirmation by buyers.

Find more projects on my [GitHub](#) or [portfolio](#).

SKILLS

- ReactJS, Next.js, TypeScript, Material-UI, Bootstrap, TailwindCSS.
- Notable react libraries – React flow, react hook form, tanstack query, tanstack table, MUI
- PostgreSQL, MongoDB, NodeJS, NestJS, ExpressJS, JWT, OAuth, RBAC.
- Java + Python working knowledge, Git, AWS Basics
